Subject: Stormvault tank under Concrete Slabs

Dear Sir,

Further to your earlier email, and our subsequent conversation, we hereby take the opportunity to confirm, our Stormvault modular underground tanking system is perfectly suitable to be used under concrete basement slabs.

The location of the tanks will be based on the layout plans, if unclear from layout plans, please contact your nearest agent for any top backfill or distance requirements of these tanks from boundaries and footings. The Stormvault are perfectly suitable to under traffic applications under basement slabs as well, with appropriate top cover.

Please see attached installation images attached for similar applications.

If you need any further information, please feel free to contact us, and once again thank you for the time and opportunity given.

Yours faithfully,

MR. MINON DESAI
